

Crowdmark is a web application that enables educators to upload and grade paper assessments online in a massive scale, drastically reducing the amount of time spent marking.

How does Crowdmark work?

An instructor uploads a blank assessment and a list of students to Crowdmark. Crowdmark generates a file with papers for each student with unique graphical codes appearing on every page. The papers are printed and students complete the assessment as usual. The papers are then scanned and uploaded to Crowdmark to grade online. Instructors can grade alone or invite others to help. The exams and feedback are shared with students and archived for later access.

Users at universities and K-12 schools across North America have found that they can cut grading time by 50-70% by using Crowdmark

Crowdmark is packed with features to help teachers save time while giving students valuable and meaningful feedback.

Lightning-fast marking interface

Accommodates multiple markers

Easy archiving and sharing

Support for large-scale exams

Simple and intuitive design
